

Networks

Networks assist the sharing of information and resources.

When GeekSupport setups up a network for you,we also analyse your resources to ensure you have optimal use of them.

Resources include

- printers
- routers
- modems
- file servers
- servers
- laptops
- pda
- PCs

If you need devices added to your network, give GeekSupport a call on 1300 78 8209.

Or alternatively, email us at service@geeksupport.com.au

What type of networks are there?

- wired using cables like Cat5 or Cat6, running over Gigabyte or Megabyte links.
- Wireless networks
- remote access using VPN

Depending on your own situation, one type of network might be superior and cost effective over another.

For home networks, GeekSupport recommends using a wireless setup.

For offices, because of security a wired network is recommended.

Of course, each business is unique, so call GeekSupport on 1300 788 209 if you need a helping hand.
